

GRPD::Material::MaterialRegistry::operator=

```
graph LR; A[GRPD::Material::MaterialRegistry::operator=] --> B[GRPD::Material::MaterialRegistry::MaterialRegistry]; B --> B;
```

The diagram illustrates a sequence of operations. It begins with a call to the `operator=` method of the `GRPD::Material::MaterialRegistry` class. This call leads to the construction of a new `GRPD::Material::MaterialRegistry` object. Finally, there is a self-loop on the newly constructed object, indicating a recursive or iterative process.
