

PDCommon::Utils::Logger::getInstance

PDCommon::Utils::Logger::operator=

PDCommon::Utils::Logger::Logger

```
graph LR; A[PDCommon::Utils::Logger::getInstance] --> C[PDCommon::Utils::Logger::Logger]; B[PDCommon::Utils::Logger::operator=] --> C; C --> C;
```

The diagram illustrates the relationship between two methods and a class. On the left, two white rectangular boxes with black borders contain the method names: 'PDCommon::Utils::Logger::getInstance' (top) and 'PDCommon::Utils::Logger::operator=' (bottom). On the right, a gray rectangular box with a black border contains the class name 'PDCommon::Utils::Logger::Logger'. A blue arrow points from the 'getInstance' method box to the class box. Another blue arrow points from the 'operator=' method box to the class box. A blue curved arrow (self-loop) originates from the top of the class box and points back to the top of the same box.
