

PDCommon/Initial/include/NeighborList.h

```
graph TD; A[PDCommon/Initial/include/NeighborList.h] --> B[vector]; A --> C[cstdintdef];
```

The diagram illustrates the dependencies of the header file `PDCommon/Initial/include/NeighborList.h`. It is represented as a root node in a gray box at the top. Two blue arrows point downwards from this root node to two child nodes, `vector` and `cstdintdef`, which are also in gray boxes. This indicates that `NeighborList.h` includes or depends on these two components.

vector

cstdintdef
